Airfoil 3.4.3

Airfoil... Send any audio to AirPort Express units, Apple TVs, and even other Macs and PCs, all in sync! It's your audio — everywhere!

With Airfoil you can take audio from any application and send to your AirPort Express units, as well as Apple TVs, and even other Macs and PCs running Airfoil Speakers! Transmit audio from RealPlayer, Windows Media Player, QuickTime Player, and other media players. Send audio from web-based applications like Pandora, Last.fm, and other to the AirPort Express. You can even stream audio from audio devices like RadioSHARK, XM and Sirius radios, around your house.

Requires OS X 10.5+. $25.00.

Audio Hijack Pro 2.9.6

Audio Hijack Pro drastically changes the way you use audio on your computer, giving you the freedom to listen to audio when you want and how you want. Record and enhance any audio with Audio Hijack Pro - it's the cornerstone of your digital audio experience.

Audio Hijack Pro will allow you to record any application's audio, from internet streams to DVD audio and everywhere in between. If your machine can play it, Audio Hijack Pro can record it. And that's not all - Audio Hijack Pro will also enhance any audio, unsing industry-standard VST and AudioUnit audio effects to make your music sound incredible. Record. Enhance. Enjoy!

Requires OS X 10.5+. $32.00.

Carbon Copy Cloner 3.3

Carbon Copy Cloner... Clone, synchronize, backup. Schedule and for-
get it. Try it 'til you trust it.

In its simplest form, CCC will clone one hard drive to another, copying every single block or file to create an exact replica of your source hard drive. This is very useful if, for example, your laptop is damaged and you must send it in for repair.

CCC can also be used to perform regular backups of your data. When you select a source disk in CCC, you are presented with the contents of that disk (hidden items too). Simply uncheck the items that you do not want to backup, and CCC will provide ample indication what will and will not be copied. Select a target disk to which you would like to backup, then press the clone button.

The key to a successful backup plan is to actually do the backups regularly. When left to a human, the task often gets tacked on to the end of a very long list of other things to do. When you eventually have a catastrophe, the data is simply gone. You know that feeling -- you just lost six years of family photos. Your kids being born, their first birthdays, their first everything. The answer to this is consistent and regular backups, placed on a schedule and handled automatically by your computer. CCC includes that functionality, and takes it even further.

Requires OS X 10.4.8+.   Free / $10.00.

ClickToFlash 1.6b2

ClickToFlash is a WebKit plug-in that prevents automatic loading of Adobe Flash content. If you want to see the content, you can opt-in by clicking on it or adding an entire site to the whitelist.

Try control-clicking (or right-clicking) on an unloaded Flash box to access ClickToFlash's
contextual menu which allows you to do advanced things like edit its whitelist, specify settings, and load all Flash on the page. Requires OS X 10.5+. Free.

KeyCue 4.5

KeyCue helps you to use your Mac OS X applications more effectively. Just hold down the Command key for a while - KeyCue comes to help and shows a table of all currently available keyboard shortcuts. When you have found the desired shortcut in the KeyCue table, just type it and continue working as usual. The KeyCue window will disappear automatically. You no longer need to memorize and remember key combinations, just press the command key and KeyCue tells you what you want to know. Over time, you will automatically remember frequently used shortcuts and become a power user of your favorite applications, working much more efficiently.

Requires OS X 10.4+. $26.99.

PCalc 3.5.1

PCalc 3 is a fully featured scriptable scientific calculator for Mac OS X with support for hexadecimal, octal and binary calculations, as well as an RPN mode, programmable functions, and an extensive set of unit conversions. A Dashboard Widget is included with the main application.

Requires OS X 10.4.2+. $19.00.

Pulsar 1.5.5

Pulsar is a simple desktop app that allows you to stream music from your XM or Sirius satellite radio accounts. No web browser or hardware required. You can use it with Airfoil to stream music wirelessly to speakers around

December '09 Shareware News Demo   by Owen Saxton

your home that are attached to an AirPort Express.
Requires OS X 10.5+ and an XM or Sirius account. $15.00.

SuperDuper! 2.6.2

SuperDuper is an advanced, yet easy to use disk copying program. It can, of course, make a straight copy, or "clone" -- useful when you want to move all your data from one machine to another, or do a simple backup. In moments, you can completely duplicate your boot drive to another drive, partition, or image file.

Clones for safety. To ensure you can safely roll back a system after the unexpected occurs. With a few clicks, you can easily "checkpoint" your system, preserving your computer's critical applications and files while you run on a working, bootable copy. If anything goes wrong, just reboot to the original. When you do, your current Documents, Music, Pictures -- even iSync data -- are available! You can get back to work immediately.

Clones for industry! SuperDuper has enough features to satisfy the advanced user, too. Its simple-but-powerful Copy Script feature allows complete control of exactly what files get copied, ignored, even aliased ("soft linked" for the Unix inclined) from one drive to another.
Requires OS X 10.4+. $27.95

Screensavers   See html://pure-mac.com/screensaver.html for more.   Most items listed below are free!
